

Software Requirements Specification

Esports Tournament & Community Platform

Document Title	Software Requirements Specification — Esports Tournament & Community Platform
Version	1.0
Status	Draft — Implementation Ready
Prepared For	Development, Design, QA & AI Coding Agent Teams
Date	September 25, 2026

This document is a structured, implementation-ready conversion of the original informal project prompt. Every feature, workflow, UI/UX detail, and constraint from the source prompt is preserved in full; no functionality has been removed, simplified, or reinterpreted.

19. Performance	20
20. Error Handling	20
21. Edge Cases	20
22. Admin Requirements	20
23. Technical Constraints	21
24. Dependencies	21
25. Testing Requirements	21
26. Acceptance Criteria	23
27. Requirements Traceability Matrix	25
28. Open Items / TBD Log	28

- This SRS is a structured, developer-ready conversion of the original project prompt. **No functionality, behavior, constraint, or instruction from the original prompt has been removed, weakened, or reinterpreted.**
- Every requirement is traceable to the original prompt text. See Section 28, "Requirements Traceability Matrix."
- Where the original prompt was ambiguous or informally worded, the original intent has been preserved and the ambiguity is explicitly flagged as **TBD** rather than resolved by invention. See Section 29, "Open Items / TBD Log."
- Requirement IDs follow the scheme: FR Functional, UI UI/UX, UX User Experience/Flow, AUTH Authentication, DEV Device Management, SEC Security, API Backend/API, DATA Database, ANIM Animation/Motion, PERF Performance, ADM Admin, EDGE Edge Case, TC Technical Constraint, TEST Testing, THEME Visual Theme/Design System, RESP Responsive Design.
- **Version 1.1** adds a Visual Theme & Design System (Section 7.1), extended motion/fluidity and animation-performance requirements (Sections 15.5–15.6), and expanded responsive breakpoint/adaptive-layout requirements (Sections 17.1–17.2), per a follow-up client instruction. All additions are integrated into existing sections **without removing, replacing, weakening, or breaking** any prior requirement, workflow, UI element, API, database behavior, or security feature. See the Change Log immediately below.

Change Log

Version	Date	Summary of Change
1.1	2026-09-25	Added Visual Theme & Design System requirements (THEME-001–THEME-010, Section 7.1); added extended motion/fluidity requirements (ANIM-401–ANIM-410, Section 15.5) and animation performance/optimization requirements (PERF-101–PERF-107, Section 15.6); added expanded responsive breakpoint and adaptive-layout requirements (RESP-001–RESP-014, Sections 17.1–17.2); added corresponding Testing Requirements (TEST-018–TEST-025), Acceptance Criteria (AC-019–AC-021), Traceability Matrix rows, and TBD-06. No existing requirement was removed, weakened, or altered.

1. Project Overview

The project is a web platform for an esports community that centralizes tournament information, team/group formation, a peer-to-peer in-game ID marketplace, and a paid rank-boosting booking service. The platform must display **past, current (ongoing), and upcoming (future) tournament details**, provide a page listing the owner's social media links, provide a booking area for rank-boosting services, and provide an area for buying and selling in-game IDs.

The platform supports two user roles at minimum — **Normal User** and **Admin** — and must be secure, fully responsive across devices, smooth/optimized, and free of specific visual effects that the original prompt explicitly disallows (see Section 23).

2. Objectives

- FR-000-a: Provide a single destination where users can view tournament information across all time states (past, current, future).
- FR-000-b: Allow users to discover and connect with the owner via a dedicated social media links page.
- FR-000-c: Allow users to browse and book rank-boosting service packages.
- FR-000-d: Allow users to list, browse, and purchase/sell in-game account IDs safely, with a seller rating system to reduce scams.
- FR-000-e: Allow users to form and join teams/groups.
- FR-000-f: Provide account, device, and session security features (authentication, email verification, password reset, device management, activity history).
- FR-000-g: Deliver a consistent, smooth, accessible, and performance-friendly UI/UX across all devices, following the platform's explicit animation and visual-style rules.

3. Scope

3.1 In Scope

- Public-facing website with: Home, Tournaments, Teams & Groups, Profile, ID Buy/Sell Marketplace, Rank Boosting Booking, Leaderboard, Social Links, About Us, and custom 404 page.
- User authentication system (registration, email verification, login, password reset, password visibility toggle).
- Account settings: theme (Light/Dark/AMOLED), interface density (Compact/Comfortable/Spacious).
- Device management (active sessions, login history, device list/details, remote logout).
- User activity history with user-controlled visibility/privacy.
- Universal search with filters, sorting, and categories/tags.
- Notifications system (requests and updates).
- Rating/review system for sellers in the ID marketplace.
- Admin role capabilities implied by the two-role model (see Section 22 and Section 29 TBD-01).
- A defined animation/motion system distinguishing "motion animations" from "normal UI transitions," with explicit prohibitions on certain visual effects.

3.2 Out of Scope / Not Specified in Original Prompt

- Payment gateway integration details for rank-boosting purchases and ID marketplace transactions are **not specified** in the original prompt (no mention of in-app payment processing — contact appears to be via displayed contact number/link). This is preserved as-is; see TBD-02.
- Specific third-party platform integrations beyond "social media links" are not detailed.

4. Users & Roles

Role	Description	Source
Admin	Elevated role with platform management capability.	"user account(two types :- normal user , 2 admins)"

Note: The original prompt's phrase "2 admins" is ambiguous — it may mean the literal number of admin accounts, or a second admin sub-tier. The original intent (two account types: Normal User and Admin) is preserved; the ambiguity is logged as **TBD-01** rather than invented away. See Section 29.

5. Information Architecture & Navigation

5.1 Global Navigation Bar (present on all pages)

- UI-001: Main logo (branding, links to Home).
- UI-002: Universal search bar — "search tournament or team" (see FR-030 Universal Search for full behavior).
- UI-003: Notification icon/center — receives requests (e.g., team/group join requests) and updates (e.g., tournament updates).
- UI-004: User account menu — behavior differs by role (Normal User vs. Admin); provides access to Profile, Settings, Device Management, Activity History, and Logout.
- TC-010: Navbar must **not** become visually "stuck"/broken during scroll or resize ("no stuck navbars" — see Section 23).

5.2 Primary Site Pages

1. Home Page
2. Tournaments Page (Past / Current / Future sections)
3. Teams & Groups Page
4. Profile Page
5. ID Buy/Sell Marketplace Page
6. Rank Boosting Booking (packages surfaced on Home; booking flow detailed in Section 8.7)
7. Leaderboard Page
8. Social Media Links Page (owner's links)
9. About Us Page (owner details)
10. Custom 404 Page
11. Authentication pages (Register, Email Verification, Login, Password Reset)

12. Account/Settings pages (Device Management, Active Sessions, Login History, Activity History, Theme & Interface settings)

6. Functional Requirements

6.1 Home Page

- FR-001: Display the global navigation bar as defined in Section 5.1.
- FR-002: Display a rotating banner area containing **approximately 5 to 6 banners** showing updates and posters.
- FR-003: Display a list of available rank-boosting packages available for booking, with details as provided by the package provider (pricing/scope/details are provider-supplied content — see TBD-03 for who manages provider content).
- FR-004: Display a "Recent Tournaments" section; each tournament entry must include a proper description and full details (not just a title).

6.2 Tournaments Page

- FR-010: Display a list of available tournaments.
- FR-011: Tournaments must be organized into **separate sections** for **Past** and **Future** tournaments (in addition to the current/ongoing tournament details already introduced on the Home page per the platform's core requirement to show past, current, and future tournament details).
- FR-012: Each tournament listing must include full details/description (consistent with FR-004).

6.3 Teams & Groups Page

- FR-020: Users can **create** a team or group.
- FR-021: Other users can **join** an existing team/group.
- FR-022: Each team/group listing must display **total member count**.
- FR-023: Each team/group listing must display **availability status** (open to join / not available) — i.e., whether the group currently has open slots.

6.4 Profile Page

- FR-024: User profile picture — selectable **only from a provided/preset set of pictures** (custom picture upload is not permitted per original instruction "use given pictures only").
- FR-025: Display the user's **in-game user ID** and **in-game username**.
- FR-026: Display the user's **in-game role** (i.e., how they play — their playstyle/role in-game).
- FR-027: Provide a **bio** field for additional free-text description.

6.5 ID Buy/Sell Marketplace Page

- FR-040: A seller can **upload a gaming ID listing** for sale, including a **screenshot** of the account/ID as proof.
- FR-041: When a buyer (or any user) clicks a listing, it opens a detail page showing:
 - The seller's account/profile information.
 - The uploaded screenshot(s).
 - The seller's **contact number or contact link** so the buyer can reach out directly.

- FR-042: The seller must have a control (button) on their own listing to **mark/delete the listing as sold** — i.e., if the ID has already been sold, the seller can remove/delete their selling banner/offer for that ID.
- FR-043: **Discount labeling**: if a seller changes their mind and lowers the price on an existing listing, the listing banner must display a calculated label showing how much cheaper the item is (amount and/or percentage discount) and tag it as a **"Good Deal."**
- FR-044: **Premium/high-value labeling**: if a seller raises the price of a listing (indicating high perceived value), the listing must be tagged **"Hot."**
- FR-045: Seller ratings — see FR-050 (Rating & Review System) — must be visible on the listing/seller detail page so buyers can assess trustworthiness before contacting a seller.

6.6 Rank Boosting Booking

- FR-050a: Users can browse the list of available rank-boosting packages (surfaced on the Home page per FR-003).
- FR-050b: Users can **book** a rank-boosting package.
- FR-050c: Package availability/details are supplied by the provider of the service.

6.7 Leaderboard Page

- FR-060: Display a section showing the **most highly rated tournaments**.
- FR-061: Display a **separate section** showing **"hot" (popular) teams or groups**.

6.8 Social Media Links Page

- FR-070: A dedicated page listing all of the **owner's social media links**.

6.9 About Us Page

- FR-071: A custom **About Us** page containing **owner details**.

6.10 Custom 404 Page

- FR-072: A custom-designed 404 (Page Not Found) error page, styled consistently with the site's theme (see Section 20 Error Handling).

6.11 Notifications

- FR-080: A notification system, accessible from the navbar (UI-003), that delivers:
- **Requests** (e.g., team/group join requests directed at the user).
- **Updates** (e.g., tournament updates, marketplace activity, system announcements).

6.12 Universal Search

- FR-030: A universal search accessible from the navbar that can search **anything inside the website** (tournaments, teams, etc., per "search tournament or team (universal search)").
- FR-031: Search results must support **Filters**.
- FR-032: Search results must support **Sorting**.
- FR-033: Search results must support **Categories/Tags**.

6.13 Rating & Review System

- FR-050: Buyers who purchase an ID from a seller can **rate the seller**, so that other users can see reputation and avoid being scammed. (Applies to the ID Buy/Sell Marketplace; see Section 6.5.)

6.14 Theme & Interface Settings

- FR-090: **Dark Mode** toggle.
- FR-091: **Light Mode** toggle.
- FR-092: **AMOLED Mode** (true-black dark variant), in addition to standard Dark/Light modes.
- FR-093: **Interface density** setting with three options:
 - Compact
 - Comfortable
 - Spacious
- FR-094: **Password visibility toggle** ("see password") on all password entry fields (login, registration, reset, etc.).

7. UI/UX Requirements

7.1 Visual Theme & Design System (Added — Theme/Motion/Responsive Addendum)

(This subsection was added in response to a follow-up client instruction defining the platform's visual identity. It supplements, and does not replace, any prior UI/UX, animation, or technical-constraint requirement. Where this subsection describes glow, gradients, or lighting, it must be read together with, and does not override, the prohibitions in Section 15.4/Section 23 — see THEME-010 below.)

- THEME-001: The platform's primary visual direction is a **greenish, game-inspired theme** that must feel **unique, modern, and premium** rather than a generic green website skin.
- THEME-002: Use a **deep dark base** as the dominant background tone across the interface (primary surfaces, backgrounds, and containers).
- THEME-003: Use **cool emerald/teal accent colors** as the platform's signature accent, applied to key interactive and brand elements.
- THEME-004: Blend in **subtle blue-green (blue/teal-influenced) gradients** where they improve the design — the palette is emerald/teal-led with a subtle blue undertone, not a flat single green.
- THEME-005: Use **dynamic lighting/glow selectively** (not globally) to highlight key elements, states, or moments of emphasis — glow is an accent technique, not a default treatment for every element.
- THEME-006: The palette (base, accents, gradients, glow) must be integrated **naturally and consistently** across: cards, buttons, progress elements (bars, loaders, counters), borders, backgrounds, and interactive states (hover/focus/active/disabled/selected).
- THEME-007: The theme must remain **easy to read and visually balanced** — strong text/background contrast and clear visual hierarchy take priority over decorative color usage at all times.
- THEME-008: The overall aesthetic should read as **distinctive, modern, slightly futuristic, and connected to the game/esports subject matter**, while staying clean and premium (not cluttered or "neon-overload").
- THEME-009: The theme applies across both the **Dark Mode and AMOLED Mode** defined in FR-090/FR-092, and must also inform a coherent **Light Mode** (FR-091) that preserves the same brand identity (emerald/teal accenting) in a light-appropriate, high-contrast form.

- THEME-010: Glow/lighting effects under THEME-005 must remain **subtle and selective** and must comply with TC-003 ("not so much edge glow" — minimal/no excessive edge glow); gradients and lighting must **not** be implemented as frosted/blurred-glass surfaces, per TC-002 ("no frosted-glass UI"); and any transition used to reveal glow/gradients states must **not** be implemented as a fade, per TC-001 ("no fade animation"). Section 15.4/Section 23 prohibitions remain fully in force and take precedence over any decorative theme styling.

Suggested reference palette (illustrative starting point — not a fixed/binding specification, since the original instructions define art direction rather than exact values; designers may refine within the THEME-001–010 intent):

Token	Suggested Value	Usage
Surface / Card	#121C19 – #16211D	Cards, panels, modals
Primary Accent (Emerald)	#1FAE7A – #22C58F	Primary buttons, active states, key highlights
Secondary Accent (Teal)	#1B8F97 – #20A6AE	Secondary actions, links, progress fills
Gradient Pair (Blue-Green)	#1B8F97 → #22C58F	Buttons, progress bars, banner accents, hero sections
Glow / Lighting Accent	#3FE6B0 at low opacity (selective use only)	Selective emphasis glow per THEME-005/THEME-010
Text — Primary (on dark)	#E9F5F1	Body/heading text on dark surfaces
Text — Muted	#8FA39C	Secondary/meta text
Border / Divider	#223530	Card borders, dividers, input outlines
AMOLED Base	#000000	AMOLED-mode background (per FR-092), same accent tokens above
Light Mode Base	#F4FAF8	Light-mode background, same accent hues at adjusted contrast

7.2 General UI/UX Rules (Original)

- UI-010: The website must be smooth and optimized for any device.
- UI-011: The website must be fully responsive for every type of device (desktop, tablet, mobile).
- UI-012: There must be **no broken links** anywhere on the site.
- UI-013: Banners on the Home page must be presented in a rotating/carousel format displaying 5–6 items (see FR-002).
- UI-014: Tournament, team/group, and marketplace listings must present information in clearly scannable cards/sections with full descriptive detail (not truncated to the point of losing information).
- UI-015: Listing labels ("Good Deal," "Hot") must be visually distinct (e.g., color-coded tags/badges) and calculated dynamically from price-change data (see FR-043, FR-044).
- UI-016: All interactive controls (buttons, toggles, menus) must have clear, consistent normal-state UI transitions (see Section 15.2) — not the motion-animation category.
- UI-017: The prohibited visual styles in Section 23 (no fade animation, no frosted-glass UI, minimal/no edge-glow, no stuck navbars) apply globally across every page and component.
- UI-018: All THEME-0xx tokens/colors (Section 7.1) must be applied consistently with UI-014–UI-017 and must not compromise the readability or contrast required by THEME-007.

8. User Flows

8.1 Registration & Email Verification (UX-001)

1. User submits registration details.
2. System sends a **verification email**; the email template must be styled consistently with the overall website theme ("must same as full website theam").
3. User verifies email before full account access is granted (exact gating behavior — see TBD-04).

8.2 Login (UX-002)

1. User enters credentials on the Login page.
2. Password field includes a **show/hide password toggle** (FR-094).
3. On success, a new **session/device entry** is created and becomes visible under Device Management (Section 10).
4. On success, a new **login history** entry is recorded (Section 10.2).

8.3 Password Reset (UX-003)

1. User requests password reset.
2. System sends a reset email/link, styled consistently with the site theme.
3. User sets a new password (with show/hide toggle available).

8.4 Create / Join Team or Group (UX-004)

1. User creates a team/group (FR-020), which appears on the Teams & Groups page with member count and availability status.
2. Another user views the Teams & Groups page and requests/joins an available group (FR-021).
3. A join request may trigger a **notification** to the relevant party (FR-080).

8.5 List an ID for Sale (UX-005)

1. Seller uploads gaming ID details and a screenshot (FR-040).
2. Listing appears in the ID Buy/Sell Marketplace with default state (no discount/hot tag unless price is adjusted).
3. Seller may later adjust price:
 - Lower price → "Good Deal" tag + calculated discount label (FR-043).
 - Raise price → "Hot" tag (FR-044).
4. Seller may mark the listing sold/delete it once the ID is sold (FR-042).

8.6 Buy an ID / Contact Seller (UX-006)

1. Buyer browses/searches the marketplace.

2. Buyer clicks a listing → detail page opens showing seller account info, screenshot(s), and contact number/link (FR-041).
3. Buyer contacts seller off-platform via the provided contact method (see TBD-02 regarding whether transactions are processed in-platform).
4. After purchase, buyer can rate the seller (FR-050).

8.7 Book a Rank Boosting Package (UX-007)

1. User views available packages on the Home page (FR-003).
2. User selects a package and books it via the booking space (FR-050b).

8.8 Rate a Seller (UX-008)

1. After a completed purchase, the buyer submits a rating for the seller.
2. The rating becomes visible on the seller's listings/profile to inform future buyers (FR-050, FR-045).

9. Authentication & Account Management

- AUTH-001: **Secure authentication** for all user accounts.
- AUTH-002: **Email verification** required as part of the account lifecycle; verification emails must match the site's visual theme.
- AUTH-003: **Password reset** flow available to all users.
- AUTH-004: **Password visibility toggle** on every password input field across the site (login, register, reset, change password).
- AUTH-005: Two account role types supported at authentication/authorization level: Normal User and Admin (see Section 4 and TBD-01).
- AUTH-006: Authenticated sessions must integrate with Device Management (Section 10) so every login is tracked as an active session and a login history entry.

10. Device Management

The platform must provide a Device Management area within account settings, comprising:

10.1 Active Sessions (DEV-001)

- DEV-001a: Display all currently active sessions for the logged-in user.
- DEV-001b: Each session entry should be identifiable (device/browser, approximate location/time as available).

10.2 Login History (DEV-002)

- DEV-002a: Display a historical log of login events for the account.

10.3 Device List & Device Details (DEV-003)

- DEV-003a: Display a list of devices associated with/used to access the account.

- DEV-003b: Each device entry must support viewing further device details.

10.4 Remote Logout / Revoke Session (DEV-004)

- DEV-004a: User can remotely log out / revoke any active session or device from the Device Management area.

11. Activity History & Privacy Controls

- FR-100: The platform must maintain a **history feature for all user types** (buyers, sellers, and other users) that records user activity — described in the original prompt as "shows activity like what they click or what ever."
- FR-101: This activity history is **optional/user-controlled**: users can **turn it off**, **hide it**, or **make it private**, per the original instruction: "optional if they don't want they can off or can hide and make it private."
- FR-102: Activity History (this section) is distinct from Login History (Section 10.2), which specifically tracks authentication/session events for security purposes. Both must be implemented as the original prompt lists them as separate concepts (general behavior history vs. device/session login history).

12. Backend & API Requirements

(The original prompt does not specify a backend technology stack, API contracts, or endpoint list. The following requirements capture the functional backend behavior implied by the functional requirements above; concrete stack choices are marked TBD where not specified.)

- API-001: Provide authentication endpoints supporting registration, email verification, login, logout, and password reset, consistent with AUTH-001 through AUTH-006.
- API-002: Provide session/device endpoints supporting listing active sessions, listing login history, listing devices/device details, and revoking sessions/devices remotely (Section 10).
- API-003: Provide tournament data endpoints supporting retrieval of past, current, and future tournaments with full descriptive details (FR-001–FR-012).
- API-004: Provide team/group endpoints supporting creation, joining, member count retrieval, and availability status (FR-020–FR-023).
- API-005: Provide profile endpoints supporting retrieval/update of preset profile picture selection, in-game ID/username, in-game role, and bio (FR-024–FR-027).
- API-006: Provide marketplace endpoints supporting listing creation (with screenshot upload), listing retrieval/detail view, price update with discount/"Hot" tag calculation, and mark-as-sold/delete (FR-040–FR-045).
- API-007: Provide rank-boosting package endpoints supporting package listing and booking (FR-003, FR-050a–c).
- API-008: Provide leaderboard endpoints supporting retrieval of top-rated tournaments and popular/"hot" teams/groups (FR-060–FR-061).
- API-009: Provide rating/review endpoints supporting submission and retrieval of seller ratings, gated to users who completed a purchase where applicable (FR-050).
- API-010: Provide notification endpoints supporting delivery/retrieval of requests and updates (FR-080).
- API-011: Provide universal search endpoints supporting cross-entity search with filter, sort, and category/tag parameters (FR-030–FR-033).

- API-012: Provide activity-history endpoints supporting recording of activity events and user-controlled visibility/privacy toggling (FR-100–FR-102).
- API-013: Provide admin endpoints as required to support the Admin role's elevated management capabilities (Section 22).
- API-014: All endpoints that mutate user, marketplace, team, or session data must enforce authentication/authorization consistent with Section 14 (Security & Privacy).

13. Database & Data Requirements

(Concrete schema/DB technology is not specified in the original prompt and is marked TBD; the following are the data entities and attributes implied by the functional requirements.)

- DATA-001: **User** entity: account credentials, role (Normal User/Admin), email verification status, profile picture (reference to preset image set), in-game ID, in-game username, in-game role, bio, theme preference (Light/Dark/AMOLED), interface density preference, activity-history visibility flag (public/hidden/off).
- DATA-002: **Session/Device** entity: session ID, device metadata, login timestamp, active/revoked status — supporting Active Sessions, Login History, Device List, and Remote Logout (Section 10).
- DATA-003: **Tournament** entity: name, description, full details, status (past/current/future), rating (for leaderboard).
- DATA-004: **Team/Group** entity: name, member list, total member count, availability status (open/closed).
- DATA-005: **Marketplace Listing** entity: seller reference, game ID details, screenshot(s), contact number/link, current price, price history (for discount calculation), status (active/sold/deleted), tags ("Good Deal," "Hot").
- DATA-006: **Rating/Review** entity: reviewer (buyer) reference, seller reference, listing reference, rating value, linked to a completed purchase.
- DATA-007: **Rank Boosting Package** entity: provider-supplied details, availability, booking records.
- DATA-008: **Notification** entity: recipient, type (request/update), read/unread status, source reference.
- DATA-009: **Activity History** entity: user reference, action/event description, timestamp, visibility flag (per FR-101).
- DATA-010: All entities must support the relationships implied above (e.g., User → Listings, User → Teams, User → Sessions, User → Ratings given/received).

14. Security & Privacy

- SEC-001: All authentication must be secure (AUTH-001), including secure credential storage (e.g., hashed passwords — implementation method TBD but must be industry-standard secure practice, consistent with the prompt's "Secure authentication" instruction).
- SEC-002: Email verification (AUTH-002) must be enforced as part of the account security model.
- SEC-003: Password reset (AUTH-003) must use a secure, time-limited mechanism.
- SEC-004: Session management must allow users to view and revoke active sessions/devices at will (DEV-001, DEV-004), preventing unauthorized persistent access.
- SEC-005: Login history (DEV-002) must be retained and viewable by the account owner to detect suspicious access.
- SEC-006: Activity history visibility must be user-controlled — off/hidden/private options must be enforced at the data-access level, not just the UI level (FR-101).

- SEC-007: Seller contact details (phone number/contact link) displayed on marketplace listing detail pages (FR-041) must only be exposed through the intended in-app viewing flow (i.e., not otherwise publicly indexed/exposed) — access should be a deliberate user action (clicking the listing).
- SEC-008: Rating submissions (FR-050) should be restricted to buyers with a legitimate relationship to a purchase, consistent with the anti-scam intent of the feature ("if buyer buys they can rate them so other can not be scammed").
- SEC-009: Role-based authorization must distinguish Normal User vs. Admin capabilities (Section 22).

15. Animation, Motion & Transition System

The original prompt explicitly requires a considered, non-excessive animation approach: *"Add animations where they improve UX, NOT everywhere... Avoid unnecessary animation and avoid making every element move... Keep animations smooth, subtle, responsive, consistent, and performance-friendly... Respect prefers-reduced-motion."*

15.1 Motion Animations (ANIM-1xx)

Used for meaningful state changes and feedback — not decorative motion. Includes:

- ANIM-101: Loading animations.
- ANIM-102: Progress bar animations.
- ANIM-103: Skeleton loaders.
- ANIM-104: Upload/download progress animations (relevant to marketplace screenshot upload, FR-040).
- ANIM-105: Counters (numeric count-up/count-down effects, e.g., member counts, ratings).
- ANIM-106: Success/error feedback animations.
- ANIM-107: Scroll-based motion / scroll reveal animations.
- ANIM-108: Micro-interactions (small, purposeful animated feedback on user action).
- ANIM-109: Meaningful state-change animations generally.
- ANIM-110: Scroll animations (explicitly required by the original prompt as a standalone feature).
- ANIM-111: Morphing elements (explicitly required by the original prompt as a standalone feature).

15.2 Normal UI Animations / Transitions (ANIM-2xx)

Standard interface transitions — not treated as "motion animation" feedback, but as baseline interactivity polish:

- ANIM-201: Hover states.
- ANIM-202: Focus states.
- ANIM-203: Buttons.
- ANIM-204: Cards.
- ANIM-205: Navbar interactions.
- ANIM-206: Menus.
- ANIM-207: Modals.
- ANIM-208: Forms.
- ANIM-209: Tabs.
- ANIM-210: Dropdowns.
- ANIM-211: Panels.

- ANIM-212: Theme/state changes (e.g., Light/Dark/AMOLED toggle transition).

15.3 General Animation Principles

- ANIM-301: Animations must be added only where they improve UX — not applied indiscriminately to every element.
- ANIM-302: Motion animations (15.1) and normal UI transitions (15.2) must remain distinct categories in implementation, per explicit instruction: "Use separate motion animations and normal UI transitions."
- ANIM-303: All animation must be smooth, subtle, responsive, consistent, and performance-friendly.
- ANIM-304: The system must respect the operating system/browser prefers-reduced-motion setting and reduce/disable non-essential motion accordingly.

15.4 Explicitly Prohibited Animation/Visual Effects

- TC-001: **No fade animation** anywhere on the site.
- TC-002: **No frosted-glass UI** (no frosted/blurred-glass ["glassmorphism"] surfaces).
- TC-003: **Minimal/no excessive edge glow** ("not so much edge glow") — edge-glow effects must be avoided or kept to an absolute minimum, not used as a general design accent.
- TC-004: **No stuck navbars** — the navbar must never visually freeze, jitter, or break during scroll/resize/state changes.

15.5 Extended Fluidity & Native-App Motion Requirements (Added — Theme/Motion/Responsive Addendum)

(These requirements elaborate on, and do not replace, Sections 15.1–15.4. All prohibitions in Section 15.4 remain fully in force — e.g., the "smooth morphing" and "transitions" below must not be implemented as fades, per TC-001.)

- ANIM-401: The overall interface must feel **smooth, fluid, and app-like**, driven by **purposeful motion** rather than repetitive, decorative animation — motion is added only where it improves usability or feedback, reinforcing ANIM-301.
- ANIM-402: Provide **optimized, smooth morphing transitions between UI states** (extends ANIM-111 Morphing elements) — e.g., a control or card smoothly reshaping/repositioning as it changes state, rather than abruptly swapping.
- ANIM-403: Provide **natural page/section transitions** when navigating between pages or major sections (e.g., Home → Tournaments, Marketplace list → Listing detail), using motion consistent with ANIM-302's separation of motion vs. normal transitions and never a fade (TC-001).
- ANIM-404: Provide **skeleton/shimmer effects** during content loading (extends ANIM-103 Skeleton loaders) — a subtle shimmer sweep may be used across skeleton placeholders to reinforce a "loading" state.
- ANIM-405: Card and navigation motion (extends ANIM-204 Cards, ANIM-205 Navbar) must feel deliberate and connected to user action (e.g., a card lifting/settling on interaction) rather than generic.
- ANIM-406: Modal and menu transitions (extends ANIM-207 Modals, ANIM-206 Menus, ANIM-210 Dropdowns) must open/close with purposeful, non-repetitive motion appropriate to the component (e.g., a menu expanding from its anchor point rather than reusing one universal effect everywhere).
- ANIM-407: **Use different motion styles for different purposes** so the experience does not feel repetitive — e.g., a card interaction should not use the exact same motion curve/pattern as a modal open, which should differ again from a page transition. This variation must remain consistent within each component type (the same component always animates the same way) while differing meaningfully between component types.

- ANIM-408: Counters, progress animations, success/error feedback, and upload/download feedback (ANIM-104, ANIM-105, ANIM-106) must feel native-app quality — smooth easing, accurate progress representation, and immediate acknowledgement of the triggering action.
- ANIM-409: Micro-interactions (ANIM-108) must stay subtle and purposeful, reinforcing feedback (e.g., a button's press state) rather than adding visual noise.
- ANIM-410: Taken together, Section 15.5 motion must read as **natural, fluid, and connected** — comparable in polish to a native application — while still respecting every prohibition in Section 15.4.

15.6 Animation Performance & Optimization Requirements (Added — Theme/Motion/Responsive Addendum)

- PERF-101: All motion/animation (Sections 15.1, 15.2, 15.5) must be **optimized for smooth performance across both low-end and high-end devices** — the experience must not degrade to jank or dropped frames on lower-powered hardware.
- PERF-102: Implementations must **avoid unnecessary re-renders** triggered by animation state changes.
- PERF-103: Implementations must **avoid layout thrashing** (repeated forced synchronous layout/reflow) caused by animating layout-affecting properties; prefer animating composited properties (e.g., transform, opacity-independent techniques that do not conflict with TC-001's no-fade rule) over properties that trigger reflow.
- PERF-104: Avoid **excessive effects or performance-heavy animations** — the number and weight of simultaneous animations on screen must be kept deliberately limited, consistent with ANIM-301's "not everywhere" principle.
- PERF-105: Prefer **efficient animation techniques** generally (e.g., hardware-accelerated/composited animation approaches) over expensive techniques, wherever a technique choice is available.
- PERF-106: **Input and UI responsiveness must be maintained during animation** — animations must never block, delay, or degrade the responsiveness of user input (taps, clicks, typing, scrolling).
- PERF-107: **prefers-reduced-motion** must be respected sitewide (restates and reinforces ANIM-304), with an **appropriate reduced-motion behavior** defined for every motion-animation category in Section 15.1 and every extended motion behavior in Section 15.5 (e.g., instant/near-instant state changes, static equivalents of shimmer/skeleton states, removal of scroll-based motion) rather than simply disabling feedback outright where feedback is still functionally necessary.

16. Loading & Feedback States

- FR-110: Loading states must use the motion-animation patterns defined in Section 15.1 (loading animations, skeleton loaders, progress bars) — not decorative effects.
- FR-111: Upload flows (e.g., marketplace ID screenshot upload, FR-040) must show upload/download progress feedback (ANIM-104).
- FR-112: Success and error actions (e.g., booking confirmation, listing posted, rating submitted, login errors) must use success/error feedback animations (ANIM-106).
- FR-113: Empty states (e.g., no tournaments available, no active sessions, no listings) must be clearly communicated in the UI (implied by overall "smooth and optimised" requirement and the general need for a complete, non-broken experience — UI-012).

17. Responsive Design

- UI-020: The site must be responsive for any type of device (explicit requirement: "responsive for any type of device").
- UI-021: The site must be smooth and optimized for any device (UI-010).
- UI-022: No broken links or layout breakage across breakpoints (UI-012).
- UI-023: The navbar (Section 5.1) must remain functional and non-"stuck" across all breakpoints (TC-004).

17.1 Breakpoint & Device Coverage (Added — Theme/Motion/Responsive Addendum)

- RESP-001: The UI must be fully responsive across **all practical screen sizes and resolutions**, explicitly including: small phones, large phones, tablets, laptops, desktops, ultrawide monitors, and high-resolution/high-DPI displays.
- RESP-002: The UI must support both **portrait and landscape orientations** on devices where both are applicable (phones, tablets).
- RESP-003: Coverage under RESP-001/RESP-002 extends (does not replace) UI-011/UI-020/TC-007's existing "responsive for any type of device" requirement, making the breakpoint matrix explicit for implementation and QA purposes (see TEST-021).

17.2 Adaptive Layout Behavior (Added — Theme/Motion/Responsive Addendum)

- RESP-010: Components must **intelligently reflow, resize, and reposition** to fit the available viewport — simple uniform scale-down of a fixed desktop layout is not sufficient.
- RESP-011: Layouts must **prevent overflow, clipping, and broken layouts** at every breakpoint in RESP-001.
- RESP-012: Layouts must **prevent unusable controls** (e.g., touch targets too small to tap accurately, overlapping interactive elements) at every breakpoint.
- RESP-013: **Spacing, typography, touch targets, and visual hierarchy** must remain consistent and appropriate across breakpoints — proportions may adapt per device class, but the design language must stay recognizably the same platform throughout.
- RESP-014: RESP-010–RESP-013 apply to every page and component defined elsewhere in this SRS (Sections 5–11), including the global navigation bar (UI-023/TC-004), banners (UI-013), listing cards (UI-014), and the visual theme defined in Section 7.1.

18. Accessibility

(Not explicitly detailed in the original prompt beyond the reduced-motion requirement; the following is preserved directly from what was specified, with no invented additions beyond baseline good practice implied by "smooth and optimised for any device.")

- ANIM-304 (repeated for visibility): Respect prefers-reduced-motion.
- UI-024: Password visibility toggle (FR-094) supports users who need to visually verify input.
- TBD-05: No further accessibility requirements (e.g., WCAG level, screen-reader specifics, color-contrast standards) were specified in the original prompt; implementers should apply standard accessibility best practice while not contradicting any explicit instruction above (e.g., prohibited effects in Section 15.4).

19. Performance

- PERF-001: The site must be "smooth and optimised for any device."
- PERF-002: Animations must be performance-friendly (ANIM-303) and must not degrade responsiveness.
- PERF-003: Given the explicit instruction to avoid unnecessary animation (ANIM-301), performance should be prioritized over decorative visual effects.

20. Error Handling

- FR-120: Custom 404 page for any non-existent route (FR-072), styled consistently with the overall site theme and free of the prohibited effects in Section 15.4.
- FR-121: No broken links anywhere on the site (UI-012) — all navigation must resolve to valid destinations or the custom 404 page.
- FR-122: Authentication error states (invalid credentials, expired reset link, unverified email attempting restricted access) must be clearly communicated using the success/error feedback pattern (ANIM-106).
- FR-123: Marketplace and booking actions must surface clear error feedback on failure (e.g., failed upload, failed booking) consistent with ANIM-106.

21. Edge Cases

- EDGE-001: A marketplace listing is marked sold/deleted by the seller (FR-042) while a buyer is actively viewing/contacting — the listing detail page should reflect the sold/removed status rather than remaining live indefinitely.
- EDGE-002: A seller changes price multiple times in succession — the discount/"Hot" tag calculation (FR-043, FR-044) must reflect the most current price relative to the relevant baseline price.
- EDGE-003: A team/group reaches full capacity — availability status (FR-023) must correctly reflect "not available" so users cannot attempt to join a full group.
- EDGE-004: A user disables/hides Activity History (FR-101) after previously having it enabled — prior visibility behavior must respect the updated privacy preference going forward.
- EDGE-005: A user revokes an active session (DEV-004) that is their current session — the platform must handle this gracefully (e.g., log the user out of that session).
- EDGE-006: A user attempts to rate a seller without a qualifying completed purchase — this should be prevented/restricted per SEC-008.
- EDGE-007: Email verification is not completed — the platform must consistently apply whatever access restriction is intended (see TBD-04) rather than behaving inconsistently across features.
- EDGE-008: Reduced-motion is enabled at the OS/browser level — all Section 15.1 motion animations must degrade gracefully per ANIM-304.

22. Admin Requirements

The original prompt establishes Admin as one of the two account types ("user account (two types :- normal user , 2 admins)") but does not enumerate specific admin-only capabilities beyond this role distinction.

- ADM-001: The system must support an Admin role distinct from Normal User at the authentication/authorization level (AUTH-005, SEC-009).
- ADM-002: Admin-level management capability is implied for content that otherwise has no clear owner-user in the functional requirements above — e.g., management of rank-boosting package listings if "provider" content is not managed by ordinary sellers (see TBD-03), and general platform moderation implied by the marketplace's anti-scam intent (SEC-008).
- TBD-01 / TBD-03 (cross-referenced): The precise scope of Admin-only screens/actions was not itemized in the original prompt; specific admin screens beyond role-gating are marked TBD rather than invented. See Section 29.

23. Technical Constraints

The original prompt lists explicit "must follow" rules; all are preserved verbatim in intent:

- TC-001: No fade animation.
- TC-002: No frosted-glass UI.
- TC-003: Not too much edge glow (minimize/avoid).
- TC-004: No stuck navbars.
- TC-005: No broken links.
- TC-006: Smooth and optimized for any device.
- TC-007: Responsive for any type of device.
- TC-008: Profile pictures must come only from a provided/preset picture set — no custom upload (FR-024).
- TC-009: Email verification and password reset communications/pages must be styled consistently with the overall website theme.
- TC-010: Navbar must remain stable/functional at all times (duplicate emphasis of TC-004 from Section 5.1, preserved as originally repeated in intent).

24. Dependencies

(Not explicitly specified in the original prompt. The following are implied technical dependencies necessary to satisfy the explicit requirements; no specific vendor/library is mandated by the prompt, so concrete choices remain TBD.)

- Email delivery service/provider for verification and password-reset emails (AUTH-002, AUTH-003, TC-009).
- File storage for uploaded marketplace screenshots and preset profile picture assets (FR-040, FR-024).
- Real-time or polling mechanism for notifications (FR-080).
- Session/device tracking infrastructure to support Device Management (Section 10).

25. Testing Requirements

- TEST-001: Verify all functional requirements in Section 6 operate exactly as specified for both Normal User and Admin roles where applicable.
- TEST-002: Verify authentication flows (registration, email verification, login, password reset, password visibility toggle) end-to-end (Section 9).
- TEST-003: Verify Device Management features — active sessions display correctly, login history is accurate, device list/details are accurate, and remote logout/revoke functions correctly (Section 10).

- TEST-004: Verify Activity History respects user privacy settings (off/hidden/private) at both UI and data-access levels (Section 11).
- TEST-005: Verify marketplace listing lifecycle: create with screenshot, price-down → "Good Deal" + discount calculation, price-up → "Hot" tag, mark-as-sold/delete (Section 6.5).
- TEST-006: Verify rating/review flow is restricted to qualifying buyers and displays correctly on seller/listing pages (Section 6.13).
- TEST-007: Verify Teams & Groups create/join flow, member count accuracy, and availability status accuracy (Section 6.3).
- TEST-008: Verify universal search returns correct results with filters, sorting, and categories/tags applied (Section 6.12).
- TEST-009: Verify theme switching (Light/Dark/AMOLED) and interface density (Compact/Comfortable/Spacious) apply correctly and persist (Section 6.14).
- TEST-010: Verify all animation behavior matches Section 15 — correct categorization of motion vs. normal transitions, and correct suppression under prefers-reduced-motion.
- TEST-011: Verify none of the explicitly prohibited effects (Section 15.4 / Section 23) appear anywhere in the UI (visual regression testing recommended).
- TEST-012: Verify responsive behavior across mobile, tablet, and desktop breakpoints, including navbar stability (Section 17).
- TEST-013: Verify custom 404 page renders for all invalid routes and there are no broken links across the site (Section 20).
- TEST-014: Verify notification delivery for both "requests" and "updates" categories (Section 6.11).
- TEST-015: Verify tournament data correctly separates and displays Past, Current, and Future tournaments with full details (Section 6.1–6.2).
- TEST-016: Security testing — verify session revocation, password reset token expiry, and role-based access control between Normal User and Admin (Section 14, Section 22).
- TEST-017: Verify edge cases in Section 21 are all handled gracefully.
- TEST-018: Verify the visual theme (Section 7.1) is applied consistently across cards, buttons, progress elements, borders, backgrounds, and interactive states in both Dark Mode and AMOLED Mode, and that an equivalent branded Light Mode exists (THEME-001–THEME-009).
- TEST-019: Verify all glow/lighting and gradient usage stays subtle/selective and does not violate TC-003 (excessive edge glow), TC-002 (frosted-glass UI), or TC-001 (fade animation), per THEME-010.
- TEST-020: Verify text/background contrast and overall readability of the theme meet THEME-007 across all pages and both/all color modes.
- TEST-021: Verify the extended motion requirements (Section 15.5) — morphing transitions, page/section transitions, shimmer effects, card/nav motion, modal/menu transitions — are implemented, are visually distinct from one another per component type (ANIM-407), and do not repeat identically across unrelated components.
- TEST-022: Performance-test animations on representative low-end and high-end devices to verify PERF-101–PERF-106 (no dropped frames/jank, no blocked input, no unnecessary re-renders or layout thrashing).
- TEST-023: Verify reduced-motion behavior is defined and functional for every item in Sections 15.1 and 15.5, not only globally suppressed (PERF-107).
- TEST-024: Verify responsive behavior across the full breakpoint/device matrix in Section 17.1 (small phones, large phones, tablets, laptops, desktops, ultrawide, high-DPI displays) in both portrait and landscape orientations where applicable.

- TEST-025: Verify adaptive layout behavior (Section 17.2) — components reflow/resize/reposition without overflow, clipping, broken layouts, or unusable/too-small touch targets at any tested breakpoint.

26. Acceptance Criteria

A build is considered acceptance-ready when:

- AC-001: Every functional requirement listed in Section 6 is implemented and demonstrable, with no feature from the original prompt missing.
- AC-002: Authentication (secure login, email verification themed to the site, password reset, password visibility toggle) is fully functional (Section 9, AUTH-001–AUTH-006).
- AC-003: Device Management (active sessions, login history, device list/details, remote logout) is fully functional (Section 10).
- AC-004: Activity History exists for all user types and can be toggled off/hidden/private by the user (Section 11).
- AC-005: The ID marketplace supports upload with screenshot, seller contact exposure on click-through, mark-as-sold/delete, dynamic "Good Deal" discount labeling, and "Hot" high-price labeling (Section 6.5).
- AC-006: The seller rating system is functional and gated to genuine buyers (Section 6.13, SEC-008).
- AC-007: Teams & Groups creation/joining works with accurate member counts and availability status (Section 6.3).
- AC-008: Rank-boosting packages are browsable and bookable (Section 6.6).
- AC-009: Leaderboard correctly displays top-rated tournaments and hot/popular teams in separate sections (Section 6.7).
- AC-010: Social Media Links page and About Us page are present and populated with owner information/links (Section 6.8–6.9).
- AC-011: Universal search functions across the site with filters, sorting, and categories/tags (Section 6.12).
- AC-012: Theme options (Light/Dark/AMOLED) and interface density options (Compact/Comfortable/Spacious) are implemented and persist per user (Section 6.14).
- AC-013: The animation system correctly implements the motion-animation and normal-transition categories from Section 15, and none of the explicitly prohibited effects (fade animation, frosted glass, excessive edge glow, stuck navbars) appear anywhere.
- AC-014: prefers-reduced-motion is respected sitewide.
- AC-015: The site is fully responsive, smooth, and free of broken links across all target devices.
- AC-016: Custom 404 page is implemented and themed consistently with the site.
- AC-017: Admin role is distinguishable from Normal User at both UI and authorization levels.
- AC-018: All items in Section 25 (Testing Requirements) pass.
- AC-019: The deep-dark/emerald-teal visual theme (Section 7.1, THEME-001–THEME-010) is implemented consistently across the site, remains highly readable and visually balanced, and does not violate the Section 15.4/Section 23 prohibitions.
- AC-020: The extended motion system (Section 15.5) is implemented with non-repetitive, purpose-appropriate motion styles across morphing, page transitions, shimmer, card/nav motion, and modal/menu transitions, and meets the performance requirements of Section 15.6 (PERF-101–PERF-107) on both low-end and high-end test devices.

- AC-021: The site meets full responsive coverage per Section 17.1–17.2 (RESP-001–RESP-014) across the specified device/breakpoint matrix and both orientations, with no overflow, clipping, broken layouts, or unusable controls.

27. Requirements Traceability Matrix

Req ID	Requirement Summary	Original Prompt Source (paraphrased location)
FR-010–012	Tournaments page with past/future sections	"next page turnaments / list of available past and future tournament each have seprate sections"
FR-020–023	Teams & Groups create/join, member count, availability	"next page teams & gropus ... user can create a team and groups ... with lie total memeber and avalabe or not"
FR-024–027	Profile: preset picture, ID/username, role, bio	"profile page ... user picture (use given pictures only) ... in game user id and user name ... in game role ... bio"
FR-040–045	ID marketplace: upload, screenshot, contact, sold/delete, discount tag, hot tag	"next page id sell or booking / user can upload gaming id and screen shot ... deleted ther seeling banner ... tag good deal ... tag hot"
FR-050a–c	Rank boosting booking packages	"booking space where we can book for rank boosting" / "avalabe deatils proveded by the provider"
FR-060–061	Leaderboard: top-rated tournaments, hot teams/groups	"leader board page shows page where most rated turnaments are shows and also in seprate shows hot team or popular gropes"
FR-070	Social media links page	"page where all the links o social media of the owner"
FR-071	About Us page	"custom about us page {owner deatils}"
FR-072	Custom 404 page	"custom 404 page"
FR-080	Notifications (requests/updates)	"notification (recives requests or updates)"
FR-030–033	Universal search with filters/sorting/categories	"universal search user can search by anything but inside of website (Filters, Sorting, Categories/tags)"
FR-050 (rating)	Seller rating system	"add rating on seller so if buyer buys they can rate theam so other can not be scammed"
FR-090–094	Dark/Light/AMOLED, interface density, password toggle	"dark and light model toggele also add AMOLED mode" / "Interface: Compact/Comfortable/Spacious" / "password see toggle"
FR-100–102	Activity history with privacy control	"History(for all users...) {optinal if they dont wan they can off or can hide and make it private}"

Req ID	Requirement Summary	Original Prompt Source (paraphrased location)
AUTH-001-006	Secure auth, email verification, password reset	"Secure authentication / Email verification / Password reset"
DEV-001-004	Active sessions, login history, device list/details, remote logout	"1. Device Management - Active sessions - Login history - Device list & device details - Remote logout / revoke session"
ANIM-101-111	Motion animations incl. scroll animation, morphing	"Motion animations: loading, progress bars, skeletons, counters, success/error states, upload/download, scroll reveals, micro-interactions" / "Scroll animations / Morphing elements"
ANIM-201-212	Normal UI transitions	"Normal transitions: hover, focus, buttons, cards, navbar, menus, modals, forms, page/state changes"
ANIM-301-304	General animation principles + reduced motion	"Add animations where they improve UX, NOT everywhere ... Respect prefers-reduced-motion"
TC-001-004	Prohibited effects	"no fade animation / not frost glass ui / not so much edge glow / no stuck navbars"
TC-005	No broken links	"no broken links"
TC-006-007	Smooth/optimized, responsive	"smooth and optimised for any device / responsive for an type of device"
SEC-001-009	Security & privacy	Derived from AUTH, DEV, FR-101, FR-050 anti-scam intent
ADM-001-002	Admin role	"user account (two types :- normal user , 2 admins)"
API-001-014, DATA-001-010	Backend/DB implied support for all above	Derived to support all explicit functional requirements; no stack specified in original prompt
THEME-001-010	Deep-dark base, emerald/teal accents, blue-green gradients, selective glow, applied across UI, readable & balanced	Theme/Motion/Responsive addendum: "deep dark base with cool emerald/teal accents, subtle blue-green gradients, and selective dynamic lighting/glow... integrate the palette naturally... maintaining strong readability and visual balance"

Req ID	Requirement Summary	Original Prompt Source (paraphrased location)
ANIM-401–410	Smooth/fluid/app-like motion, morphing between UI states, page/section transitions, shimmer, card/nav motion, modal/menu transitions, non-repetitive per-purpose styles	Theme/Motion/Responsive addendum: "smooth, fluid, and app-like with purposeful motion... smooth morphing between UI states, natural page/section transitions... skeleton/shimmer effects... Use different motion styles where appropriate so the experience remains natural and non-repetitive"
PERF-101–107	Animation performance/optimization: low-end/high-end devices, avoid re-renders/layout thrashing, efficient techniques, responsive input, reduced-motion	Theme/Motion/Responsive addendum: "Optimize all motion for smooth performance across low-end and high-end devices. Avoid unnecessary re-renders, layout thrashing... Respect prefers-reduced-motion and provide appropriate reduced-motion behavior"
RESP-001–014	Full breakpoint coverage (phones/tablets/laptops/desktops/ultrawide/high-DPI), portrait/landscape, intelligent reflow, no overflow/clipping, consistent spacing/typography/touch targets	Theme/Motion/Responsive addendum: "fully responsive across all practical screen sizes and resolutions... Components must intelligently reflow, resize, reposition, and adapt rather than simply scale down. Prevent overflow, clipping, broken layouts, and unusable controls"

(All requirement families listed above map one-to-one to explicit original-prompt statements, or are directly derivative support requirements needed to implement an explicit statement, as noted in each row.

THEME/ANIM-4xx/PERF-1xx/RESP rows trace to the follow-up Theme/Motion/Responsive Design addendum, dated 2026-09-25, and are additive to — not replacements for — the original requirement set.)

28. Open Items / TBD Log

ID	Item	Why It's Open
TBD-02	Whether marketplace/rank-boosting transactions are processed in-platform (payment) or purely off-platform via displayed contact info	Original prompt only describes displaying seller contact number/link; no payment flow is described.
TBD-03	Who manages/provides rank-boosting package content ("provider")	Original prompt says "details provided by the provider" without defining whether "provider" is Admin, a special seller role, or an external party.
TBD-04	Exact access restriction while email is unverified	Original prompt requires email verification but does not specify what is blocked until verified.
TBD-05	Formal accessibility standard (e.g., WCAG level)	Not specified beyond prefers-reduced-motion; no further invention added.
TBD-06	Exact hex/token values for the visual theme (Section 7.1)	The Theme/Motion/Responsive addendum specifies art direction (deep dark base, emerald/teal accents, blue-green gradients, selective glow) rather than exact color values. Section 7.1 provides an illustrative, non-binding reference palette; final values remain a design-stage decision within the stated intent.

End of Software Requirements Specification.
